especially for vets

If you want to know more about Veterinary Physiotherapy and what we could do together for your patients then – I am happy to meet and talk with you or a group of vets at the clinic.

Chartered Veterinary Physiotherapy is an evidence based profession*.

Physiotherapy used science based research* to develop clinical reasoning as the decision basis for providing therapy.

Chartered Veterinary Physiotherapists are professionals, we are not technicians. We have expertise and excellence in physical rehabilitation and management of movement for long term conditions.

Physiotherapy in both humans and animals will

- Return to best possible function**
- Speed recovery and ease pain**
- Improve tissue healing quality**
- Alleviate owner/patient anxiety**
- Improve quality of life**

Offering Physiotherapy as an option for owners during the recovery of their animal or to manage long-term conditions provides the full package of patient focused, holistic care using a multi-disciplinary team.

Animal conditions that chartered vet physios work alongside vets to treat: *

Cranial Cruciate Ligament issues – post op or conservatively

Hip Dysplasia

Elbow Dysplasia – post op or conservatively

Patella Luxation - post op or conservatively

Hip / Elbow Replacement

Femoral head and neck excision

Tendon and Ligament injury

Muscle injury or strain

Osteoarthritis

Fracture repair

Intervertebral Disc Disease - post op or conservative

Chronic Degenerative Radiculomyelopathy (CDRM)

FCE and other neurological conditions

Regular progress reports are provided to the referring vets and combined appointments with the vet can be done.

* a number of relevant scientific journal references are listed on the website.
